TREASURY CONFERENCE 2026

Limor Carmeli · Shiran Shapira

Financial infrastructure for enterprise finance.

Meteor centralizes bank data, treasury, payments and lease accounting in one system, integrated with your ERP.

400+

enterprise clients

150+

global banks, plus every
Israeli bank

1K+

ERP integrations

ISA

licensed by the Israel
Securities Authority

Why this matters in 2026.

63%

of senior finance leaders
expect FX volatility to rise in
2026.

Alpha Group / Corpay, Countdown
to 2026

89%

of those surveyed do not
systematically stress-test their
FX forecasts.

Alpha Group / Corpay, Countdown
to 2026

61%

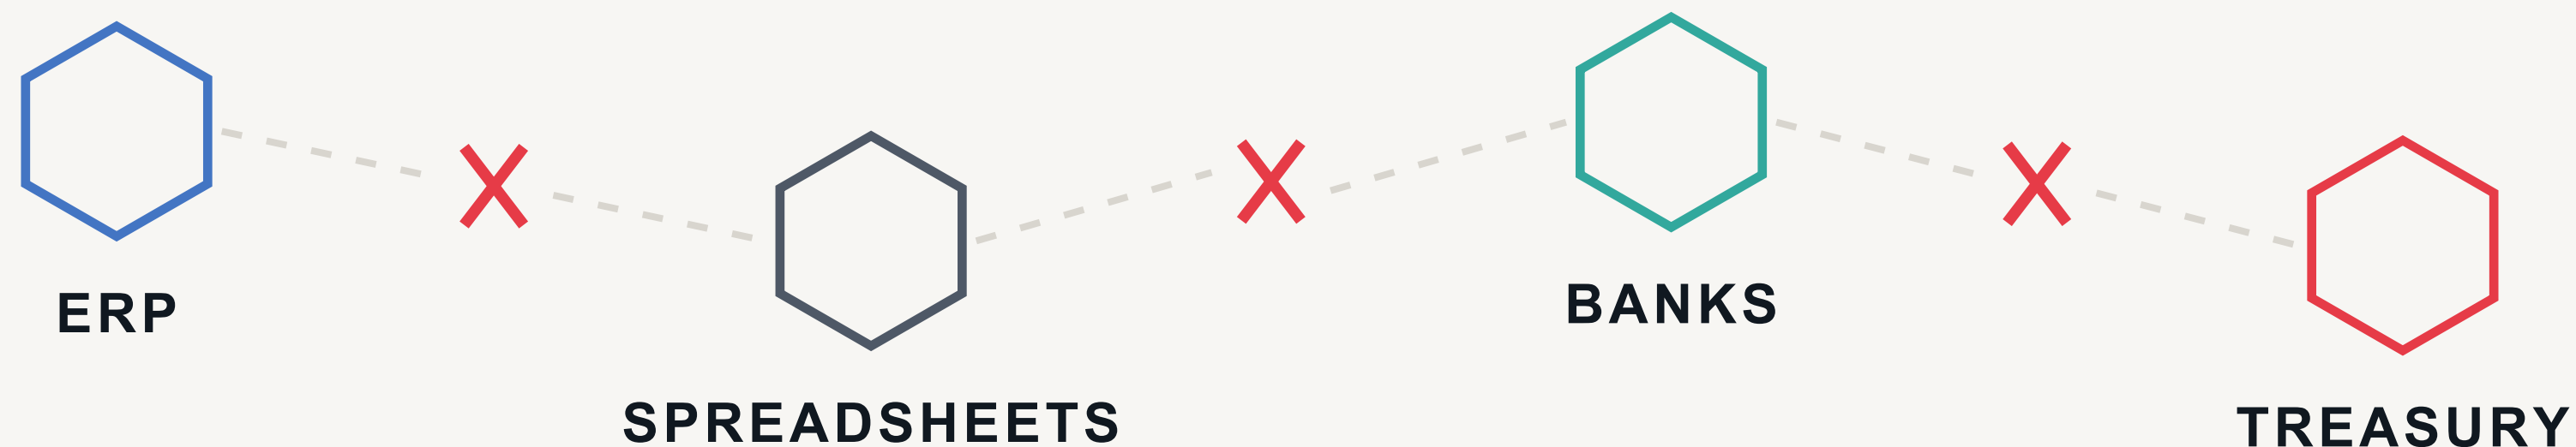

of finance leaders report
finance and accounting talent
shortages.

Corporate Finance & Accounting
Talent Study 2026

More volatility. Less certainty. No additional headcount.

The Treasury Challenge

Decisions have to be faster. The information behind them is still in pieces.

FRAGMENTED INFORMATION

Balances and exposure sit in banks, ERP and spreadsheets.

LIMITED FORESIGHT

What is coming next still takes manual analysis.

DISCONNECTED EXECUTION

Acting on the decision is a separate job, in another system.

The gap is not the data. It is the distance between information, decision and execution.

Connected Treasury. End to end.

One system between your ERP and your banks. No re-keying in between.

See. Decide. Execute.

Three steps. One system.

SEE

Real-time visibility across
cash, banks and ERP.

DECIDE

AI-supported insight to
forecast, optimize and plan.

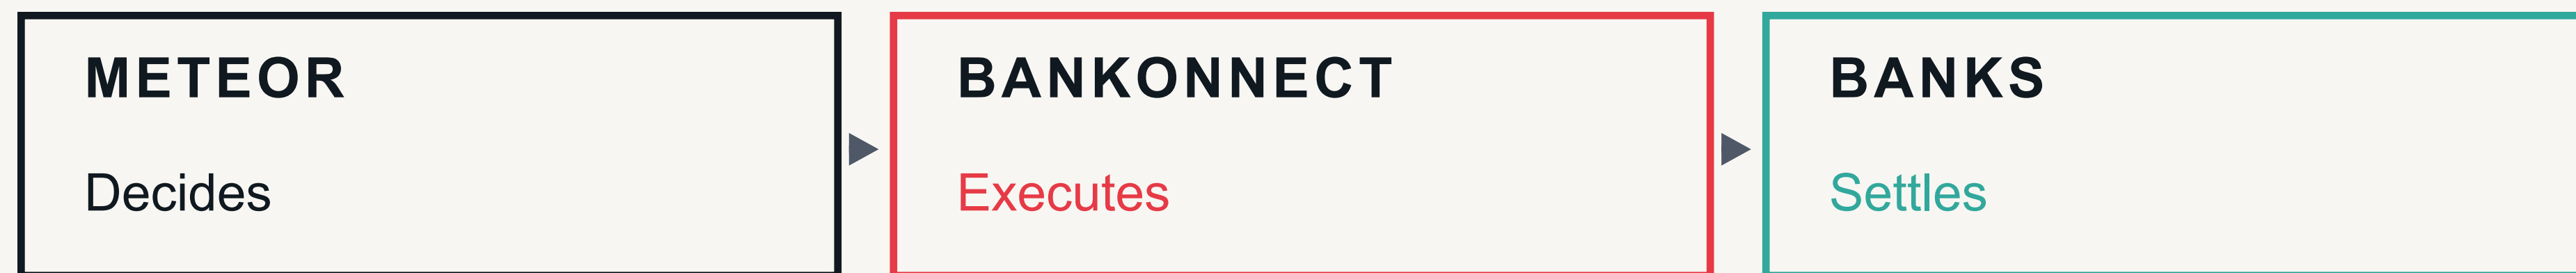

EXECUTE

From the decision to the
payment, in one flow.

Approvals, controls and a full audit trail at every step.

Execution runs on BANKCONNECT.

Meteor is the platform. BANKCONNECT is the execution layer inside it.

One layer, three jobs: bank connectivity, payment initiation from the ERP, and the approval trail behind both.

You already know the name. It now sits inside a full treasury platform.

Intelligence where decisions happen.

DATA → INSIGHT → RECOMMENDATION → ACTION

**Where will we face a liquidity gap in the next seven days,
and what should we do about it?**

AI is being built across forecasting, reconciliation and payments.

Meteor recommends. Your approvals still govern every action.

Now let's see it in action.

IN THE NEXT FEW MINUTES

- One cash position across every connected bank.
- A seven-day liquidity forecast, built from live data.
- One payment initiated from the ERP, start to finish.
